time. Plants should be blooming for the holidays if cool treatments are started by early November. Once the plants develop buds the short day and temperature treatment can be discontinued.

One question often asked is what is the difference between Christmas Cactus , Thanksgiving cactus, and Easter cactus? They all have slightly different growth habits. Christmas cacti have scalloped stem segments and bloom at the stem tips. Thanksgiving cacti have 2-4 pointy teeth along the edges of the sections and will bloom earlier than Christmas cactus if left to natural day-length. Easter cacti have rounded teeth along the segments and bloom primarily in the spring but may also periodically re-bloom at other times
